**OPB Fox 12 Primary Election Survey General Election**

May 6-9, 2016; N=900

**HOW TO READ CROSTABLES**

Q1. All in all, do you think things are headed in the right direction or are things pretty much on the wrong track?

	Total	Gender	
		Male	Female
Total	1371 100%	599 100% (B)	772 100% (C)
Right direction	943 69%	394 66%	549B 71%
Wrong track	236 17%	126C 21%	100 14%
Don't know	192 14%	79 13%	113 15%

(sig=.05) (all\_pairs) columns tested BC

**How to Read Crosstables:** In the example chart (left), rows represent the three possible response options to the question “All in all, do you think things are headed in the right direction, or are things pretty much on the wrong track?” The three response options are: “right direction,” “wrong track,” and “don’t know.” The amounts in each response category sum to the amount in the “total” row at the top of the table.

The first column, or banner, is the “Total” column. It reflects the overall results.

The next two columns reflect the results of a subgroup, “Gender.” The gender subgroup is composed of Males and Females, each with their own column. Both gender groups are assigned a letter (Male=B, Female=C).

These two columns show how male’s attitudes compare to female’s attitudes. As shown in the chart, 69% of the full sample thinks things are headed in the right direction. Looking at the gender subgroup, 71% of women think things are headed in the right direction, compared to 66% of males.

**Statistically Significant Differences:** If a pair of cells has a difference which is statistically significant, the larger of the two cells is flagged with the letter of the opposite column. The test shows the difference in female’s attitudes about things being headed in the right direction is statistically

significantly different than those of male’s, which is signified by a “B” (the letter given to Males) next to female’s results for “right direction.”

The footnote indicates the level of significance (sig=.05). This level of significance means that 5% of the time, the difference between how the two groups feel about the direction is due to random chance, while 95% of the time the difference is meaningful.

**Statement of Limitations:** Any sampling of opinions or attitudes is subject to a margin of error, which represents the difference between a sample of a given population and the total population. The margin of error is a statistic expressing the amount of random sampling error in a survey’s results and differs by sample size, as reflected in the table below.

**Margin of Error Based on Sample Size**

N=1200	N=1000	N=800	N=600	N=500	N=400	N=300	N=200	N=150	N=100	N=50
+/- 2.8%	+/- 3.1%	+/- 3.5%	+/- 4.0%	+/- 4.4%	+/- 4.9%	+/- 5.7%	+/- 6.9%	+/- 8.0%	+/- 9.8%	+/- 13.8%

Q5. There is a primary election in Oregon on May 17. Last week, ballots were mailed to registered voters.  
Have you received your ballot in the mail?

Q16. Next, I'd like to ask you about a measure that may be on your ballot in the November general election.  
I will it exactly as it will appear.

Increases corporate minimum tax when sales exceed \$25 million; funds education; healthcare, senior services

A "Yes" vote increases corporate minimum tax when sales exceed \$25 million; removes tax limit; exempts "benefit companies"; increased revenue funds education, healthcare, senior services.

A "No" vote retains existing corporate minimum tax rates based on Oregon sales; tax limited to \$100,000; revenue not dedicated to education, healthcare, senior services.

If the election were today, would you vote "Yes" to support the measure or "No" to oppose it?
